Name Servers are on the Same Subnet

The term "Name Servers are on the Same Subnet" refers to the practice of placing name servers within the same network segment as the clients or servers they are serving. This arrangement allows for more efficient communication between the name servers and the clients or servers, as it reduces the need for traversing the entire network to resolve name lookups. Subnetting helps to manage network traffic more effectively, prevent unnecessary broadcasts, and improve overall network performance.

URL Checker for Your Browser

You can easily add a URL checker to Chrome, Opera, Mozilla Firefox, or other browsers. To do this, enable the display of the bookmarks bar in your browser settings. Then either click on the "Check URL of the visited page" button or drag it to your browser's active bookmarks bar.

+ Check URL of the visited page

To analyze the URL of any page you visit in the future, simply click on "Check URL of the visited page" from the active bookmarks panel. This will open a URL checking form.

Next, just click "Check URL or IP" to perform the scan.
